To this end, Fitts (1964; Fitts & Posner, 1967) suggests that motor skill acquisition follows three stages: the cognitive stage, the associative stage, and the autonomous stage. As a coach I found this simple paradigm to be extremely helpful for understanding, guiding, and accelerating the motor learning process.

## **Skill Acquisition - IResearchNet**

The cognitive approach considers that learning a motor skill results in the acquisition and the memorization of an internal representation of the movement (often conceptualized as a motor schema) which is used to build a motor program and define a sensory reference of the movement before its execution.
