Carl Rogers: Believed in the inherent goodness of people and emphasized the importance of free will and psychological growth. He suggested that the actualizing tendency is the driving force behind human behavior. Abraham Maslow: Suggested that people are motivated by a hierarchy of needs. The most basic needs are centered on things necessary for life such as food and water, but as people move ...

## **The 4 Major Personality Perspectives and Theories**

In psychology, adjustment refers to the behavioral process of balancing conflicting needs, or needs challenged by obstacles in the environment. Humans and animals regularly adjust to their environment. For example, when they are stimulated by their physiological state to seek food, they eat to reduce their hunger and thus adjust to the hunger stimulus. Adjustment disorder occurs when there is an inability to make a normal adjustment to some need or stress in the environment. Successful adjustment

Adjustment disorder is a condition that negatively impacts someone’s mental health and wellbeing. This relatively common mental disorder develops in response to stressors; when events or life crises exceed someone’s ability to effectively cope, an adjustment disorder may occur. Just what is an adjustment disorder?
